

Instructions for Making Ties

item #TIE1
item #TIE2

Transferring to ties can be done in a number of ways. Images can be tiled and transferred to the entire tie surface creating a pattern with the image. Alternatively, one image can be transferred to the tie and placed at the middle or bottom of the tie. Some opt to transfer a few images placed randomly giving a collage effect. Use your imagination!

Before heat transfer, it is best to trim the transfer paper to size for best results.

Follow instructions for transfer as you would with T-shirts, mouse pads, etc.

For example:

When using RPL inkjet transfer paper

- 1) Set press temperature for use with transfer paper.
- 2) Place transfer face down and press for 10 seconds.
- 3) Peel while hot.

When transferring to black tie item #TIE2, you must use opaque transfer paper.
(see instructions for item #800Q or item #521)
